OPEN ACCESS

The implementation of k-means algorithm to determine the quality of teak wood in image based on the texture 012003

Erlan Darmawan, Panji Novantara, Gentur Priguna Suwanto, Rio Andriyat and Yati Nurhayati

[+ Open abstract](#) [View article](#) [PDF](#)

OPEN ACCESS 012004

Analysis and implementation of the bi-polar slope one algorithm with the content base filtering method in producing culinary place recommendations in kuningan regency

Endra Suseno, Rio Priantama and Dede Irawan

[+ Open abstract](#) [View article](#) [PDF](#)

OPEN ACCESS 012005

Technology readiness and acceptance model as a factor for the use intention of LMS e-Learning in Kuningan University

Fahmi Yusuf, Nita Mirantika, Tri Septiar Syamfithriani, Erlan Darmawan and Dede Irawan

[+ Open abstract](#) [View article](#) [PDF](#)

OPEN ACCESS 012006

Implementation Dijkstra's Algorithm for Non-Players Characters in the Game Dark Lumber

Rio Andriyat Krisdiawan, Aji Permana, Erlan Darmawan, Fitra Nugraha and Anto Kriswandiyanto

[+ Open abstract](#) [View article](#) [PDF](#)

OPEN ACCESS 012007

Implementation of tensor flow-based deep learning in the learning application of around things in English

Heru Budianto, Toni Khalimi, Rachmat Ismaya, Erik Kurniadi and Erlan Dharmawan

[+ Open abstract](#) [View article](#) [PDF](#)

OPEN ACCESS 012008

Implementation of the fisher yates shuffle algorithm in the randomization of department recommendation examinations at PMB FKOM UNIKU

Yati Nurhayati, Siti Maesyaroh, Sherly Gina Supartman, Erlan Darmawan and Elin Herlina

[+ Open abstract](#) [View article](#) [PDF](#)

OPEN ACCESS 012009

The implementation of digital differential analyzer algorithm for route determination's topographic maps based on android

Sugeng Supriyadi, Cecep J. Abbas, Tito Sugiharto and Elpan Januar

[+ Open abstract](#) [View article](#) [PDF](#)

OPEN ACCESS

012025

Implementation Fuzzy Logic in System Design for Predicting the Production of Songkets in West Sumatera

Devia Kartika and Rima Liana Gema

[+ Open abstract](#) [View article](#) [PDF](#)

OPEN ACCESS

012026

The Effectiveness of the Concept of CRM Application for SMEs during the COVID-19 Pandemic

Mutiana Pratiwi and Ulya Ilhami Arsyah

[+ Open abstract](#) [View article](#) [PDF](#)

OPEN ACCESS

012027

Cluster Application with K-Means Algorithm on the Population of Trade and Accommodation Facilities in Indonesia

Aang Munawar, Gen Gen Gendalasari, I Made Gede Ariestova Kurniawan, D Purnomo, Nur Haris Ependi, Rulinawaty, Muhammad Isa Indrawan and Muhammad Sadri

[+ Open abstract](#) [View article](#) [PDF](#)

OPEN ACCESS

012028

Use of Analytical Network Process Algorithm in the decision-making process

Buyung Perdana Surya, Laila Refiana Sai, Jenita, Suwarno Suwarno, Wirdayani Wahab, Onny Medaline, Ana Rusmardiana, Stepi Anriani, Gita Widi Bhawika and Siti Mujanah

[+ Open abstract](#) [View article](#) [PDF](#)

OPEN ACCESS

012029

Implementation of data mining with Apriori techniques to determine the pattern of purchasing of agricultural equipment (Case Study: XYZ Store)

Supriyono, Kiki Farida Ferine, Diana Puspitasari, Rulinawaty and Elkana Timotius

[+ Open abstract](#) [View article](#) [PDF](#)

OPEN ACCESS

012030

Best Model and Performance of Bayesian Regularization Method for Data Prediction

Pratomo Setiaji, Bambang Widjanarko, Yuda Syahidin, Hidayatullah Himawan, Nurintan Asyiah Siregar, Harmayani, Lukman Samboteng, Nur' Ainun Gulo and Reni Kartikaningsih

[+ Open abstract](#) [View article](#) [PDF](#)

OPEN ACCESS

012031

Implementation of ML Routing Sets in Determining Cases of Traveler's Covid-19 Infection
Students Privacy and Cookies policy.

Septyan Purnama Kristanto, Reza Syehma Bahtiar, Meriksa Sembiring, Hidayatulah Himawan,
Lukman Samboteng, Hariyadi and I Ketut Suparya

[+ Open abstract](#) [View article](#) [PDF](#)

OPEN ACCESS

012032

Performance One-step secant Training Method for Forecasting Cases

N L W S R Ginantra, Gita Widi Bhawika, GS Achmad Daengs, Pauer Darasa Panjaitan, Mohammad Aryo Arifin,
Anjar Wanto, Muhammad Amin, Harly Okprana, Abdullah Syafii and Umar Anwar

[+ Open abstract](#) [View article](#) [PDF](#)

OPEN ACCESS

012033

Application of the clustering algorithm to the small and micro industrial companies for mapping regions with k-medoids

Hendra Jatnika, Haris Jamaludin, Auliya Rahman, I Ibrahim, Joseph H Sianipar, Ari Waluyo,
Abdul Rahman Maulana Siregar and Q Qomario

[+ Open abstract](#) [View article](#) [PDF](#)

OPEN ACCESS

012034

Analysis of the effect of the lecturer satisfaction with the Naive Bayes Data Mining technique on institutional performance

Siti Aisyah, Preddy Marpaung, Wiwin Aprinai, Komda Saharja, I Made Yuda Suryawan, Bektu Tufiq Ari Nugroho,
Amin Nurbaedi, Hasrul Azwar Hasibuan, Bernadetha Nadeak and Ahmad Tohir

[+ Open abstract](#) [View article](#) [PDF](#)

OPEN ACCESS

012035

Decision support system analysis for selecting a baby cream product with Preference Selection Index (PSI) Baby Sensitive Skin Under 3 Year

Muhammad Amin, Novica Irawati, Hommy Dorthy Ellyany Sinaga, Dwi Retnosari, Jauhari Maulani and
Harmonvikler Dumoharis Lumban Raja

[+ Open abstract](#) [View article](#) [PDF](#)

OPEN ACCESS

012036

Application of K-Medoids Cluster Result with Particle Swarm Optimization (PSO) in Toddler Measles Immunization Cases

Eka Pandu Cynthia, Indra Riyana Rahadjeng, Erfan Karyadiputra, Fauzi Yusa Rahman, Agus Perdana Windarto,
Martalina Limbong, Teguh Iman Hermanto, E. Rusiadi and Y Yarmani

[+ Open abstract](#) [View article](#) [PDF](#)

OPEN ACCESS

012037

Combination of Sobel+Prewitt Edge Detection Method with Roberts+Canny on Passion Flower Image Identification

Anjar Wanto, Syarifika Den Rizki, Silfia Andini, S Surmayanti, N L W S R Ginantra and Henry Aspan

This site uses cookies. By continuing to use this site you agree to our use of cookies. To find out more, see our [Privacy and Cookies policy](#).

[+ Open abstract](#) [View article](#) [PDF](#)

OPEN ACCESS

012038

Utilization of Rough Sets Method with Optimization Genetic Algorithms in Heart Failure Cases

Silfia Andini, Rianto Sitanggang, Anjar Wanto, Harly Okprana, GS Achmad Daengs and Solly Aryza

[+ Open abstract](#) [View article](#) [PDF](#)

OPEN ACCESS

012039

Prewitt and Canny Methods on Inversion Image Edge Detection: An Evaluation

Sri Rahmawati, Retno Devita, Ruri Hartika Zain, Eva Rianti, Najla Lubis and Anjar Wanto

[+ Open abstract](#) [View article](#) [PDF](#)

OPEN ACCESS

012040

Comparison of machine learning algorithms for chest X-ray image COVID-19 classification

Samsir Samsir, Jimmi Hendrik P. Sitorus, Zulkifli, Zuriani Ritonga, Fitri Aini Nasution and Ronal Watrianthos

[+ Open abstract](#) [View article](#) [PDF](#)

OPEN ACCESS

012041

A Performance Comparison of RESTful Applications Implemented in Spring Boot Java and MS.NET Core

Hardeep Kaur Dhalla

[+ Open abstract](#) [View article](#) [PDF](#)

OPEN ACCESS

012042

A Solution to Improve the Security of the Internet of Things Network with Lightweight Encryption Methods

Nguyen Van Tanh, Ngo Quang Tri, Nguyen Linh Giang and Tien-Le Duy

[+ Open abstract](#) [View article](#) [PDF](#)

OPEN ACCESS

012043

Artificial Bee Colony Algorithm for Solving Green Vehicle Routing Problems with Time Windows

Dana Marsetiya Utama, Triani Aulya Fitria and Annisa Kesya Garside

[+ Open abstract](#) [View article](#) [PDF](#)

OPEN ACCESS

012044

AIC Algorithm for Engaging Commitment

Bui Huy Khoi and Dam Tri Cuong

[+ Open abstract](#) [View article](#) [PDF](#)

OPEN ACCESS 012045

Analyzing the Soft Error Reliability of Convolutional Neural Networks on Graphics Processing Unit

Khalid Adam, Izzeldin I. Mohd and Younis Ibrahim

[+ Open abstract](#) [View article](#) [PDF](#)

OPEN ACCESS 012046

Strategy for Implementing Immersive Technologies in the Professional Training Process of Future Designers

Hanna Chemerys, Anna Vynogradova, Hanna Briantseva and Sergii Sharov

[+ Open abstract](#) [View article](#) [PDF](#)

OPEN ACCESS 012047

Bibliometric Analysis on Governance Index Topics Using Scopus Database and Vosviewer

Bartoven Vivit Nurdin, Simon Sumanjoyo Hutagalung, Yulianto, Robi Cahyadi Kurniawan and Dedy Hermawan

[+ Open abstract](#) [View article](#) [PDF](#)

OPEN ACCESS 012048

Online Student Attendance System Using Android

Bangun Munthe, Herman, Ardian Arifin, Budi Sulisty Nugroho and Elies Fitriani

[+ Open abstract](#) [View article](#) [PDF](#)

OPEN ACCESS 012049

Augmented Reality as a Medium for Learning Measurements and Quantities

Ardian Arifin, Suci Haryanti, Zulvia Trinova, Fahmi Abdul Halim and Pandu Adi Cakranegara

[+ Open abstract](#) [View article](#) [PDF](#)

OPEN ACCESS 012050

Characteristic Parameters of Epoch Deep Learning to Predict Covid-19 Data in Indonesia

Widi Hastomo, Adhitio Satyo Bayangkari Karno, Nawang Kalbuana, Andri Meiriki and Sutarno

[+ Open abstract](#) [View article](#) [PDF](#)

OPEN ACCESS 012051

Data Processing and Plant Identification Based on Computer

Ahmad Sujana, Mohamad Abduh Rosyidin, Purwadi Budi Santoso, Magambit and Salamatul Afiyah

[+ Open abstract](#) [View article](#) [PDF](#)

OPEN ACCESS 012052

Determinant of the Use of Go-Pay Among University Student; an Extended the Unified

***Rhodomirtus Tomentosa* Extract Activity on Diabetic Wound**

Lusi Putri Dwita^{*}, Ema Dewanti, Fitra Dwipa, Ira Fitria Ramadani, Mareta Dwi Sulistiorini

Universitas Muhammadiyah Prof. DR. HAMKA, Jakarta, Indonesia

*lusi_putridwita@uhamka.ac.id

Abstract. *Karamunting* (*Rhodomirtus tomentosa* (Aiton) Hassk) is a plant that is widely used as a traditional medicine for, among others, wound healing. This study aims to determine the activity of ethanol extract ointment of 70% *karamunting* leaves (*Rhodomirtus tomentosa* (Aiton) Hassk) and its ability on topical healing of diabetic wounds. A total of 48 rats were divided into 6 treatment groups, namely *karamunting* leaf extract ointment 2.5%, 5%, and 10%, diabetic control, non-diabetic control, and honey. The data obtained were the number of inflammatory cells, the number of fibroblasts, collagen density and epithelial thickness which were observed in days 3, 7, 10 and 14 days after the making of the wound. Based on histological observations, the results showed that the application of ethanol extract ointment with 70% *karamunting* leaf could affect the number of inflammatory cells, fibroblasts, and collagen density as well as significant re-epithelization speed compared to diabetes controls. Of the three concentrations tested, ointment at a concentration of 10% showed comparable results to honey. It can therefore be concluded that the application of ethanol extract ointment of 70% *karamunting* leaves can increase the speed of healing diabetic wounds.

1. Introduction

According to the International of Diabetic Federation (IDF 2015), the global prevalence of people suffering diabetic has increased in 2014 by 8.2% with 387 million people compared to 2013 with 382 million people. The figure is expected to increase to more than 592 million in 2035 (da Rocha Fernandes et al. 2016). The probability of diabetics with diabetic foot wounds is around 15-25%. A research conducted at a hospital in Indonesia discovered that the range of diabetic foot wounds is around 17-32%, with cases of amputation reaching 15-30% (Soewondo et al. 2017)

Wound healing begins with an inflammatory response, whereby inflammatory cells move towards the injured parts and phagocytosis such as bacteria that can cause the infection (Watson 2014). Inflammatory cells consist of neutrophils and macrophages that secrete cytokines and various growth factors (Ebaid et al. 2013). In the next phase, i.e. the proliferation phase, fibroblasts migrate to the wound causing granulation tissue formation, collagen synthesis, and angiogenesis as well as starting to proliferate to produce an extracellular matrix (Velnar, Bailey, and Smrkolj 2009).

Indonesia is a country which has abundant potential for medicinal plants, influencing the society to switch to natural ingredients. The increasing use of traditional medicines, both in quality and quantity, encourages people to use traditional plants as medicine. One of the plants used as a traditional medicine for wound healing is *karamunting* leaves (*Rhodomirtus tomentosa* (Aiton) Hassk). *Karamunting* is one

of the plants that must be developed because it has been reported to possess a number of properties, including antidiabetic, anti-diarrheal, and the ability to heal burns (Lim 2016).

The activity of natural ingredients in wound healing is closely related to antioxidant and anti-inflammatory activities, and these two activities are possessed by the *karimunting* plant. The in vitro antioxidant test showed that *karamunting* fruit extract contained $62.09 \pm 2.63\%$ RE flavonoids (Wu et al. 2015). Jeong et al (2013) discovered that the methanol extract of *karamunting* leaves showed an anti-inflammatory effect in vivo by inhibiting the production of inflammatory mediators (*nitrite oxide* and prostaglandins) in gastritis and colitis rats. Other studies have shown the activity of *karamunting* leaves as an antibacterial especially in staphylococcus, which is known to be the main cause of infection in diabetic wounds (Saising et al. 2008). Based on this background, this study aims to test the activity of *karamunting* leaves in diabetic wounds

2. Methodology

Ethanol Extraction 70% Leaves Remek Meat

Around 9 kg *karamunting* leaves were cleaned and dried under indirect sunlight. After being dried the plant was then crushed and powdered. The simplicia powder which can be sifted with a 40 mesh sieve was then stored in a clean and tightly closed container. The simplicia powder that was obtained was as much as 750g. They were then extracted by maceration with 70% ethanol for 1 day. During the maceration process, stirring was carried out in the first 6 hours to speed up the dissolving of the components contained in *karamunting* leaves. After 24 hours, they were filtered using filter paper and the dregs were soaked again. The procedure was repeated for 7 days so that the *karamunting* leaves powder could be completely extracted. The maceration results were freed from the solvent by evaporating them using a vacuum rotary evaporator at a temperature of $\pm 50^\circ\text{C}$ until a thick extract was obtained. The yield obtained was 18.68% and the water content obtained was 18.86%. The results of the phytochemical screening test are shown in Table 1.

Table 1. Results of Phytochemical Screening Test of *Karamunting* Leaf Extract

No	Filtering	Result	Information
1	Alkaloid	-	Yellow
2	Flavonoid	+	Red
3	Saponin	+	Foam doesn't disappear
4	Tanin	+	Blackish Green
5	Steroid	-	Brown

Test Animals

The research procedure was approved by the Ethics Commission of the Muhammadiyah University Prof. Dr. Hamka (No.02/18.07/012). This study used 48 male white rats. Rats were acclimated in the research room for 14 days in order to adapt to the environment and were given standard feed and drinking ad libitum.

Table 2. Treatment of Test Animals

Day	Group					
	Non-Diabetes	Diabetes	Honey	2.5% concentration	5% concentration	10% concentration
1				Induction of STZ by IP		
5				Blood Sugar Check		
6				Shearing rat		
7				Wound Making		

8-21	Without treatment	Ointment base is applied	Given 2 drops of honey	Topical application of 2.5% extract ointment	Topical application of 5% extract ointment	Topical application of 10% extract ointment
10, 14, 17,21	Tissue collection for histopathological observation					

Induction of Diabetes Wounds

Rats were induced by STZ intraperitoneal, 5 days after STZ induction was carried out on venous blood in the tail. The examination of blood glucose levels using a clinical spectrophotometer. On the 6th day, the rats were shaved in the upper back. On the 7th day, the rats were anesthetized using ketamine at a dose of 40.08 mg/kgBW of rats intramuscularly. The area of the upper back where the wound was created was cleaned with alcohol. On the shaved back, a pattern is made with a diameter of 1 cm, then the skin was pulled and cut using surgical scissors to make an excision wound on the skin below the panniculus carnosus following the pattern (Galehdari et al. 2016). After being injured, the rats were given paracetamol 500mg orally to reduce pain.

Histological Observations

Skin biopsy specimens were taken on day 3, 7, 10, 14 after injury. The tissue taken is the wound tissue to the muscle so that when observing the skin parts are clearly visible. The tissue was taken using a scalpel. Before sampling, the test animals were injected with 230mg/kg i.p ketamine. Afterwards, the tissue was fixed using 10% formalin (Badr 2013). Observation on the number of inflammatory cells, the number of fibroblasts, collagen density and thickness of re-epithelialization were carried out using a light microscope (Olympus) in each group on day 3, 7, 10 and 14 after injury. In observing the number of inflammatory cells and the number of fibroblasts using a magnification of 400x in 10 fields of view, it was observed and calculated using the Image Raster 3.0 application. Meanwhile, observation of collagen density with taking collagen images per 10 fields of view and of the epithelium was carried out in every 5 fields of view in the wound area randomly with a magnification of the object 400x (Ozay et al. 2018). The process of measuring collagen thickness was carried out by observing it using the Photoshop CS 6.0

Data Analysis

The data from the observations were statistically tested in the forms of the number of inflammatory cells, the number of fibroblasts, the density of collagen and the thickness of the re-epithelialization, tested for normality and homogeneity, after which one-way analysis of variance (ANOVA) was carried out, then followed by the Tukey test.

3. Result and Discussion

For diabetic wounds, the healing process occurs slowly due to poor blood circulation, resulting in reduced absorption of nutrients and oxygen (Bhan et al. 2013). In this study, rats were first induced with streptozotocin (STZ) to make them experiencing hyperglycemia. STZ, which is toxic to pancreatic β cells, enters pancreatic β cells through the glucose transporter GLUT 2 (glucose transporter type 2) and inhibits insulin production and causes pancreatic β necrosis (Goud, Dwarakanath, and Chikka Swamy 2015). The dose of STZ used was 40 mg / kgBB for each mouse and the blood sugar was measured on the 5th day after STZ induction.

Wounds in diabetic conditions experience prolonged wound healing due to the inhibition of the wound healing process in each of its phases, which consists of the inflammatory phase, the proliferation phase and the remodeling phase (Koh and Dipietro 2019) (Falanga 2004). The proliferation phase consists of neo-angiogenesis, fibroblast proliferation, collagen synthesis, and re-epithelialization (Dahiru et al. 2016).

The wound healing in the inflammatory phase results showed that the high inflammatory cell was at a concentration of 5% and a concentration of 10%, comparable to that of the non-diabetes group and the

honey group on day 3, where the peak of the inflammatory phase was occurring (Table 3). The peak of the inflammatory phase occurred when a large number of inflammatory cells went to the wound for bacterial phagocytosis. This is significantly different from the diabetes group which had a small number of inflammatory cells ($p < 0.05$)

Table 3. Results of the Average Number of Inflammatory Cells

Group	Total Mean \pm SD			
	Day 3	Day 7	Day 10	Day 14
Non-Diabetes	121,35 \pm 15,51 ^a	84,52 \pm 9,70	63,85 \pm 11,65	44,45 \pm 10,83
Diabetes	86,85 \pm 19,00	116,25 \pm 9,63	118,100 \pm 16,56	98,02 \pm 13,45
Honey	113,62 \pm 10,26 ^{ab}	91,67 \pm 13,00	70,25 \pm 10,95	54,57 \pm 7,29
SEDK 2,5%	103,30 \pm 12,77 ^b	104,600 \pm 10,43	86,200 \pm 15,59	72,57 \pm 9,23
SEDK 5%	108,67 \pm 11,08 ^{ab}	100,15 \pm 9,10	80,15 \pm 12,30	61,87 \pm 7,91
SEDK 10%	116,32 \pm 13,43 ^a	89,82 \pm 10,01	66,35 \pm 9,78	49,40 \pm 10,27

Description: SEDK: karamunting leaf extract ointment. The same superscript letter shows no significant difference $p > 0.05$.

In Table 3, on 7th and 10th day, it can be seen that in all groups experienced a decrease in the number of inflammatory cells, but this was different from the diabetes group which experienced an increase and only had a peak of inflammation on day 10. This shows that the diabetes group had a significant difference with other groups ($p < 0.05$), therefore there is a delay in the inflammatory phase and a delay in the proliferation phase in diabetic animals. Meanwhile, on day 14, all groups showed a decrease in inflammatory cells as well as the diabetes group.

Table 4 shows the proliferation phase, where fibroblasts were active and would migrate to the wound area, causing granulation tissue formation, angiogenesis and collagen synthesis and starting to proliferate to produce an extracellular matrix (Pastar et al. 2018).

Table 4. Results of Average Number of Fibroblasts

Group	Total Mean \pm SD		
	Day 7	Day 10	Day 14
Non-Diabetes	130.73 \pm 26.13	169.9 \pm 9.71 ^a	80.32 \pm 9.44
Diabetes	68.03 \pm 10.27	85.62 \pm 10.69 ^c	126.67 \pm 14.02
Honey	106.65 \pm 13.70	131.22 \pm 7.89 ^b	86.92 \pm 13.44
SEDK 2,5%	90.85 \pm 18.14	104.25 \pm 12.24 ^d	95.75 \pm 11.83
SEDK 5%	92.73 \pm 10.15	110.85 \pm 10.45 ^d	93.55 \pm 13.79
SEDK 10%	119.97 \pm 19.91	135.85 \pm 8.23 ^b	81.37 \pm 13.13

Description: SEDK: karamunting leaf extract ointment. The same superscript letter shows no significant difference $p > 0.05$.

Fibroblasts were cells responsible for collagen synthesis. On day 7 (Table 5), it was seen that on the number of fibroblasts in the non-diabetes group, the administration of 70% ethanol extract of *karamunting* leaf ointment, and honey group were higher than in the diabetes group. The number of fibroblasts in diabetic wounds was significantly lower than in non-diabetic wounds. This means that in diabetic wounds there was a prolonged inflammatory phase, while collagen synthesis was disturbed, angiogenesis was decreased, and the formation of mature granulation tissue was delayed. Data on day 10 demonstrated that the highest increase in the number of fibroblasts was achieved by the non-diabetes group, followed by *karamunting* leaf ointment with a concentration of 10% and honey control. The increase in the mean number of wound fibroblasts in non-diabetic rats with the ethanol extract of *karamunting* leaf with a concentration of 10% was significantly different in the diabetic group and was comparable to the honey control ($p < 0.05$). The high number of fibroblasts in the non-diabetes group made the *karamunting* leaf ointment and the 10th day honey group indicated a peak in the proliferation phase. Fibroblasts were responsible for synthesizing collagen, but they also differentiate into myofibroblasts, which help contract the wound edges.

Collagen is a major component of connective tissue which provides strength and flexibility to tissues. Collagen would cover the wounds by forming new tissue bonds. Wounds that were having depth became flush with the wound edges (Tellechea, Ana., Leal, Ermelindo., Veves, Aristidis., Carvalho 2010). Based on observation, the collagen density increased in all groups. Table 5 also shows that on the 10th day there was a peak in the proliferation phase which made collagen synthesis by fibroblasts continue to increase and collagen would accumulate to provide strength and close the wound.

Table 5. Results of Average Collagen Density

Group	Total Mean \pm SD		
	Day 7	Day 10	Day 14
Non-Diabetes	97,95 \pm 9,55	99,45 \pm 8,56 ^a	130,58 \pm 7,49
Diabetes	66,89 \pm 13,51	73,75 \pm 8,85 ^b	90,96 \pm 7,40
Honey	83,29 \pm 8,10	90,99 \pm 5,35 ^c	118,31 \pm 10,52
SEDK 2,5%	76,78 \pm 8,05	81,18 \pm 7,49 ^d	101,66 \pm 11,41
SEDK 5%	77,7 \pm 11,48	84,82 \pm 8,09 ^{c,d}	103,26 \pm 6,99
SEDK 10%	87,67 \pm 8,80	95,07 \pm 6,47 ^{a,c}	121,98 \pm 7,84

Description: SEDK: karamunting leaf extract ointment. The same superscript letter shows no significant difference $p > 0.05$.

Collagen density in the group that was applied with a 10% concentration of 70% ethanol extract of *karamunting* leaf ointment on day 7 to day 14 increased in comparison to honey control. Collagen density shows that the ethanol extract of 70% *karamunting* leaf played a role in increasing collagen density, resulting in the acceleration of wound healing in diabetes mellitus. The formation of collagen resulted in a tissue repair process in the extracellular matrix which also has an important role in initiating keratinocyte migration in the wound healing process, especially for the re-epithelialization process (Galiano et al. 2004). Re-epithelialization aims to cover the wound surface with an epithelial layer and is based on the differentiation, proliferation and migration of epidermal keratinocytes.

Table 6. Results of Re-Epithelialization Mean

Group	Total Mean \pm SD		
	Day 7	Day 10	Day 14
Non-Diabetes	187,50 \pm 35,95	197,49 \pm 21,75 ^a	217,99 \pm 34,59
Diabetes	96,63 \pm 23,54	123,24 \pm 24,54 ^b	127,34 \pm 14,75
Honey	163,57 \pm 26,69	183,64 \pm 8,41 ^c	192,81 \pm 16,19
SEDK 2,5%	137,08 \pm 20,64	157,75 \pm 19,43 ^d	167,68 \pm 29,42
SEDK 5%	142,75 \pm 16,87	164,74 \pm 30,30 ^{c,d}	176,66 \pm 21,54
SEDK 10%	173,47 \pm 47,10	190,66 \pm 30,02 ^{a,c}	207,86 \pm 32,75

Description: SEDK: karamunting leaf extract ointment. The same superscript letter shows no significant difference $p > 0.05$.

Table 7 shows that all groups experienced an increase in re-epitheliolysis from day 7 to day 14. *Karamunting* leaf ointment at a concentration of 2.5% experienced an increase in re-epithelialization, which was significantly different from that of diabetes controls. Meanwhile, at a concentration of 10%, there was an increase in epithelialization which was not significantly different from the positive control given by honey. This was because the mechanism possessed by honey and ointment of 70% *karamunting* leaf extract was the same, namely as an antioxidant and anti-inflammatory which worked to increase collagen density and increase re-epithelialization (Goren et al. 2006). Thicker re-epithelialization can close the wound more quickly, resulting in faster wound healing.

The application of ethanol extract of 70% *karamunting* leaf ointment had an activity against diabetic wounds in male white rats. This could be related to secondary metabolite compounds contained in *karamunting* leaf extract that play a role in wound healing, such as flavonoids, saponins and tannins. Flavonoids are powerful antioxidants which play a role in protecting the body against ROS and increase the function of endogenous antioxidants, and increase the levels of antioxidant enzymes in granulation

tissue. Flavonoids can also increase the process of mitogenesis, cell interaction and adhesion of molecules that play a very important role in the proliferation and epithelialization phases of wound healing. In addition, flavonoids can prevent or prolong the onset of cell death, especially excess fibroblasts, along with increased vascularity in wounds, thereby reducing fat peroxidation.

4. Conclusion

Based on the results of the study, it can be concluded that the ethanol extract ointment of 70% *karamunting* leaf with a concentration of 10% had activity on the number of inflammatory cells, fibroblasts, collagen density and thickness of re-epithelialization in diabetic wounds.
