ABSTRACT

Objective:

This research aims to analyse the effectiveness of waste management program that have been carried out by the Depok city government from 2021 to 2022. This inspection was carried out based on Law No. 15 of 2004 BPK regarding inspections of the performance of Household Waste and Similar Household Waste.

Methodology:

Questionnaires were applied as methodology in gathering data from the internal staffs, namely Sanitary Services, Local Government, Depok and related local companies. There are 8 staffs and 3 local companies' representatives. Interviews were conducted from the period of 29 August to 19 November 2023 using open questions, asking about the effectiveness, policies, and reduction of waste management by the local government. After interviewed, results were analyzed using National Waste Management Information System of the Ministry of Environment and Forestry.

Result:

The results show that the Local Government in Depok has put efforts and conducted waste management system in accordance with the National Waste Management Information System. Policies and strategies in waste management have also been undertaken, resulting around 30% waste reduction. In the future, in 2025, the Local Government has put 70% waste reduction target, which lead to more comprehensive and further efforts to achieve this target. Several strategies need to be applied aggressively, including providing 210 waste containers, 9 waste disposal sites, 30 waste disposal units, and 1 similar waste disposal facility with continuous awareness education and collaboration with households.
